

Machine Learning meets Cloud Migrations

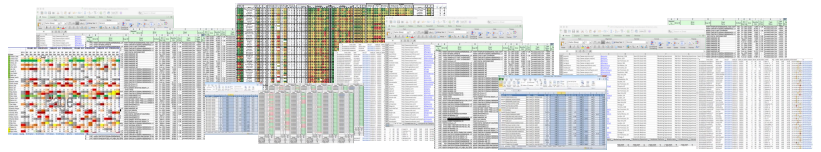

Cloud Migrations are overwhelmed by spreadsheets, data collection and an inability to make sense of the sheer volume of data collected.

LAB3's Dr Migrate is purpose built to run on top of Azure Migrate or Mover, using advanced machine learning to process millions of data points instantly.

Dr Migrate's real-time dashboards provide: in-depth technical analysis, application network mapping, modernisation scenarios, wave plans, right sizing, TCO reports and much more.

The Executive report provides everything a customer needs to sign off a business case and move straight to AMMP.
(Azure Migration and Modernization Program).

TRADITIONAL APPROACH

DATA DRIVEN APPROACH

Deployed directly from
Azure Marketplace
in minutes.
Supports **Mover** and
Azure Migrate.

Live agentless data
collection.
Same tooling used for
both assessment and
migration execution.

Available now via the
Microsoft Assessment
Desk or LAB3 direct.

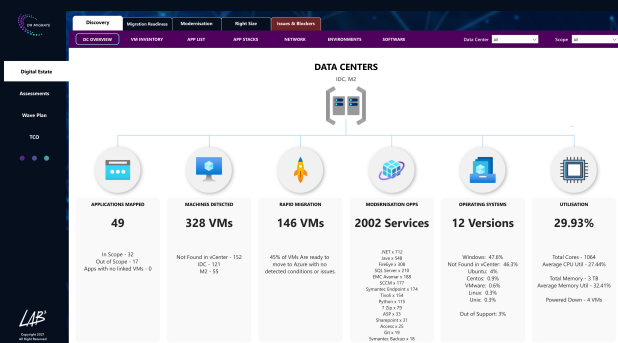

THE RESULT

Over 300 Migration Insights

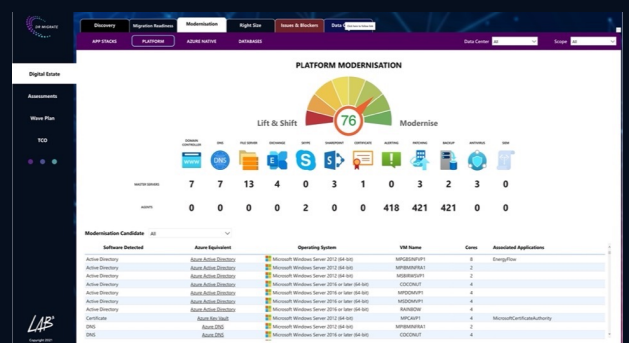

Detailed insights available in days after scan commenced.

Executive Summary of your entire Digital Estate

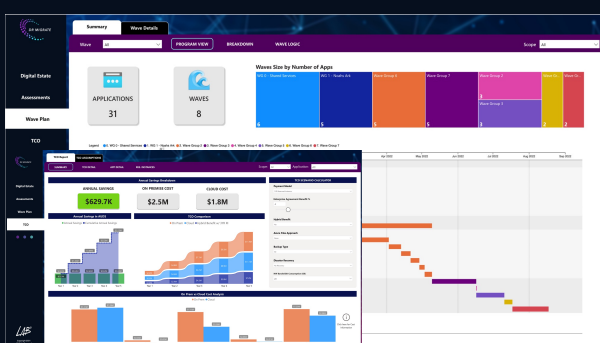

App and Platform Modernisation Options

Application Landing Zone

Automated Wave Plans & TCO Analysis

Detailed Application-Level Insights
